NEW JERSEY POPULATION TRENDS
1790 TO 1980

When the delegates to the Constitutional Convention met in 1787, they decided that population distribution should be the basis for direct taxation and for apportionment in the House of Representatives, so they approved a Constitutional requirement that every person in the nation be counted at least once every 10 years, beginning in 1790. For nearly two centuries since then, the decennial census has monitored the growth and development of the nation, yielding invaluable information about ourselves as a people: Who we are, what we do, how we live. Taken together, these 10-year assessments of the developing republic form the backbone of our history.

At the time of the first census in 1790, the nation's 3.9 million people were settled near the Atlantic Coast, with 4.7% in New Jersey and about 5% west of the Appalachians. Its 4.5 people per square mile approximated the density of present-day Wyoming. By 1980, the United States had over 227 million people spread across 50 states and the District of Columbia. There were now an average 65 people per square mile, with New Jersey leading all states at 986.

National Overview

Although national increases varied greatly during the past 200 years, they did follow certain patterns. For each of the six decades from 1790 to 1850, growth rates exceeded 32%. Then heavy losses from the Civil War, reduced immigration during the war years, and under-renumeration in the 1870 census cut the 1860-1870 growth rate to 22.6%. Increases never again reached pre-war proportions.

By the 1920s growth was slowed by a declining birth rate and by limits placed on immigration. In the 1930s the effects of the Depression which contributed to low birth rates and negligible immigration dipped the rate of change to 7.3%, its lowest figure since decennial recordkeeping.

Beginning with the post-war "baby boom" and continuing through the fifties, increases in the birth-rate and immigration resulted in an upswing. The 1950-1960 rate of 18.5% translated into an increase of 27.8 million people, which was greater than the total 1850 population. With the birth rate once again declining in the sixties, national growth slowed somewhat to 13.3% in 1970 and 11.0% by 1980.

Regional Patterns

In 1790, population was nearly equally divided between the Northeast and South. After almost 200 years, a little over half the population now lives in the Northeast and South, as America has spread westward across the nation. Interestingly, the most densely populated states in 1980 were seaboard states of colonial origin: New Jersey, Rhode Island, Massachusetts, and Connecticut.

Regional distribution in 1980 showed: 33.3% of the population in the South; 26% in the North Central; 21.7% in the Northeast; and 19.1% in the West. However, these distributions do not identify specific areas of rapid growth such as California, Florida, Alaska and the Mountain States. For example, Nevada's 63.8% increase from 1970 to 1980 led the nation.

New Jersey Trends

Despite the soaring growth of newer states, New Jersey captured the title of "Most Densely Populated State" from Rhode Island in 1970 and remains number 1 for 1980 with 986.2 people per square mile. Its high density as well as its patterns of growth and population distribution are heavily influenced by its geographical position. This strategic location between New York and Philadelphia accelerated New Jersey's early entry into industrialization and urbanization.

During the 1800s the total state population mushroomed from 211,000 to 1.9 million. However, early in the century, population growth was slow but steady in predominantly agricultural New Jersey. Agricultural and dairy areas continued slow increases throughout the 1800s. For example, Hunterdon, Sussex, and Gloucester were the only counties which failed to double their population from 1800 to 1900. Their growth rates were almost nine times less than those registered by the rest of New Jersey's counties.

In some areas of the state industrialization began much earlier than others. In the 1830s, Hoboken utilized the first steam ferries and floating dry docks, Newark manufactured patent leather, and Paterson produced Colt revolvers. The Camden-Amboy rail system was operational at this time. By the 1850s metropolitan job centers swelled the populations of Hudson, Camden, Passaic, and Essex counties. Largely because of industrialization, New Jersey maintained a high growth rate throughout the 1850s and the ensuing Civil War period. Essential war-related industries such as the manufacture of munitions helped support New Jersey's 1860-1870 population increase of 34.8%, the highest growth rate for the Northeast.

From 1900 to 1980, the state's population rose substantially from 1.9 million to 7.4 million, which by 1980 ranked New Jersey ninth among all states in total population. During the 20th century, population growth and distribution in New Jersey and in the nation were greatly affected by the status of the economy, war, and immigration. Even though population in the cities slowly decreased over the period, industrial counties in New Jersey as well as in the rest of the Northeast continued to hold the greatest numbers of people.

Large percentage gains occurred in the two decades from 1900 to 1920. Massive immigration helped to swell New Jersey's population, especially in or near industrial areas. Access improvements such as the linkage of Jersey City to New York by the first Hudson River tunnel in 1908 spurred further growth. Bergen, with its proximity to growing job centers, had the state's fastest rate of increase from 1900 to 1920. During the twenties, New Jersey led the Northeast with a gain of 28.1%. Top-ranked in density were its industrial counties of Hudson, Union, and Essex.

With the thirties and the Depression came a shift in population trends. With the Depression, there began a movement out of some urban areas. For example, Hudson County decreased steadily after 1930, while only four of its municipalities showed gains from 1930 to 1980. Likewise, the cities of Camden, Jersey City, and Hoboken recorded losses after 1930.

Nationally, higher growth rates in the 1940s and into the fifties were largely the result of the post-war "baby boom" and increased immigration from abroad. Additionally in New Jersey, heavy in-migration from other states pushed New Jersey's 1950-1960 rate to 25.5% and its 1960-1970 rate to 18.2%; the increase of 1.2 million during the sixties was the highest numerical gain by the state in any decade. Once again, much of the in-migration flow was directed into areas surrounding the major job centers of New York and Philadelphia. Between 1950-1960, numerical gains of over 10,000 were recorded by Paramus (Bergen), Fort Lee (Bergen), New Milford (Bergen), Wayne Township (Passaic), Cherry Hill (Camden), and Willingboro (Burlington). New Milford and Cherry Hill more than doubled in population from 1950 to 1960, while Willingboro was a little town of less than 900 in 1950 which rose to over 43,000 in 1970. Largely because of in-migration from neighboring states to New Jersey's suburbs, the state grew at a rate of 7 percentage points faster than the nation during the fifties and 5 percentage points faster during the sixties.

Improved access, greater automobile ownership, availability of moderately-priced land, and the amenities of life also attracted numbers of people to the state's nonmetropolitan counties. Ocean County's rapid growth reflected all of these factors including the opening of the Garden State Parkway in 1955. In county density rank, Ocean rose four slots from the fifties to the seventies. This represents an increase of 51,000 from 1950 to 1960 and of 100,000 from 1960 to 1970. While Ocean was by far the leader, other nonmetropolitan counties such as Monmouth and Sussex also experienced large gains.

Census figures for 1970 set New Jersey's population at 7.2 million with most of its people still concentrated in the "corridor" between New York and Philadelphia. Ranking one through six in density were the counties of Hudson, Essex, Union, Bergen, Passaic, and Camden. Hudson had a density of over 13,000; its municipality of West New York had over 45,000 people per square mile. Conversely, most thinly populated areas tended to be farthest from the "corridor": Sussex, Warren, Hunterdon, Cumberland, and Cape May counties. Each recorded a density of less than 250 persons per square mile.

New Jersey in 1970 hardly resembled its 1790 profile. Developing from small and predominantly rural settlements into the most densely populated state, New Jersey experienced the growth of sprawling metropolitan areas, including significant outward expansion along the path of the "corridor."

But the years between 1970 and 1980 were marked by a departure from historical trends and a realization that population growth in New Jersey, as well as the rest of the Northeast region, was slowing dramatically. The 1980 census confirmed that of the nation's four major regions, the Northeast experienced the lowest population gain over the decade, both in number and in percent.

New Jersey's 2.7% population growth rate, the lowest recorded for the state since the first census in 1790, was far below the national rate of 11.4% and translates into a gain of only 193,899 persons.

The national trend of population movement from the Northeast and Northcentral regions to the South and West was compounded within New Jersey by population shifts away from the once prevailing industrialized urban areas into rural and exurban counties, resulting in rapid growth rates for Cape May, Ocean, Hunterdon, and Sussex counties over the decade.

Older metropolitan areas showed signs of stagnation and decline. Although suburban areas continued their population increase, they could not offset the losses in the central cities in order to maintain the metropolitan growth rates of previous periods. Areas outside the cities and beyond the suburbs became the grounds for development.

The places with the largest numerical declines in population from 1970 to 1980 were the older, industrialized cities in New Jersey -- Newark, Jersey City, Camden, and Trenton. In fact, of the state's 10 largest municipalities, only Hamilton Township and East Orange managed to achieve small gains over the period. Those municipalities experiencing the largest increases were located primarily in Ocean County.

Beyond 1980, indicators point to a continued movement of the population into areas outside formal metropolitan boundaries. With much of the state's commercial facilities and employment opportunities located on widespread highway networks, outlying sections have become ripe for residential development. The trend for population and economic growth to bypass the aging urban and suburban areas of New Jersey could result in extremely slow growth for the counties of Essex, Hudson, Bergen, Passaic, and Union while the less densely settled counties of Morris, Burlington, Hunterdon, Sussex, Ocean, and Cape May can anticipate rapid rates of population expansion.

1930[3]	3	1	
1940	2	1	
1950[4]	2	1	
1960[4]	2	1	
1970	1	1	
1980	1	1	

---

* Excludes District of Columbia.

1. Dry land and land temporarily or partially covered by water, such as marshland, swamps, and river flood plains; streams, sloughs, estuaries, and canals less than 1/8 of a statute mile in width; and lakes, reservoirs, and ponds less than 40 acres of area.

2. Revised to 7,495.73 square miles since 1970. For comparability, unrevised figure is used. (Revised density, see page 32.)

3. Figures for 1930 based on 1940 area measurements; revised since publication of 1930 Census, Vol. I.

4. Figures for 1960 based on area measurements; revised since publication of 1960 reports.
